

Youssef Fathy Mohamed

Flutter Developer — Mobile Applications | Cairo, Egypt | **Military Status:** Postponed
Phone: +20 1118412983 | Email— fathyyousef896@gmail.com - | [GitHub](#) | — [LinkedIn](#) — | [Portfolio](#)
Website

Summary

Results-driven and highly analytical **Flutter Developer** specializing in **Clean Architecture**, **MVVM patterns**, and advanced state management solutions. Proven expertise in building scalable, high-performance mobile applications integrated with RESTful APIs, Firebase, and local caching systems. Demonstrated success leading cross-functional development teams, establishing clean code baselines, and delivering production-ready platforms under tight schedules. Active member of the competitive programming community with strong foundational skills in data structures, algorithms, and logical problem-solving.

Technical Skills

- **Programming Languages:** Dart, Flutter, Python, C++
- **Architecture & Patterns:** Clean Architecture, MVVM, OOP, SOLID Design Principles •
- State Management:** Bloc, Cubit, GetX, Provider
- **APIs & Data Layers:** REST APIs, JSON Processing, Firebase (Auth, Firestore, Storage), Sqflite
- **Development Utilities:** Git, GitHub Version Control, Android Studio, VS Code, Figma Designs

Soft Skills

- **Leadership & Teamwork:** Cross-functional collaboration, team leading, task delegation, and peer code reviews.
- **Problem Solving:** Advanced logical analysis, optimization of code runtimes, critical thinking, and algorithmic approach design.
- **Productivity:** Strategic communication, strict time management, multitasking under tight deadlines, and task prioritization.
- **Growth Mindset:** Continuous technical self-learning, mentoring team members, and running technical workshops.

Education & Certifications

Computer Science Diploma | Higher Technological Institute (HTI) – Cairo, EG **2023 – 2027 Focus Areas:** Software Engineering, Object-Oriented Programming (OOP), Data Structures, Analysis of Algorithms, and Database Management Systems.

Mobile App Development (Flutter) Diploma | Route IT Training Center **Oct 2025 •**

Industry-aligned technical training focused on cross-platform application architectures, native bridge capabilities, and memory management.

- Deep dive into production-grade design methodologies including SOLID principles, repository patterns, and dynamic theme handling.

Professional Experience

Flutter Developer Intern – Word of Mouth Company **Oct 2025 – Dec 2025 • Architecture**

Design: Built a full-featured production mobile application from foundational architectural setup through to production deployment phases.

- **Timeline Optimization:** Managed feature sprints efficiently to deliver key core

project milestones **2 weeks ahead** of the original schedule.

- **Component Engineering:** Designed and authored reusable, modular UI design elements to enhance long-term scalability and minimize boilerplate code.
- **Data Integration:** Integrated complex REST APIs using optimal serialization protocols, applying network caching techniques to maximize app responsiveness.

Competitive Programming Trainer – ICPC HTI Community **2024 – 2025**

- **Technical Mentorship:** Mentored and trained university students in advanced data structures, sorting algorithms, and efficient logic paradigms.
- **Contest Simulation:** Created comprehensive technical problem sets designed to simulate competitive regional contest environments.
- **Technical Content:** Authored educational problem-solving analyses and recorded an algorithmic upsolve walk-through media guide: Upsolve Walkthrough Video.

Technical Projects (Part I)

LMS Mobile Application

- **Description:** Full-scale Learning Management System mobile application designed to streamline educational content delivery, track student progress, and organize dynamic course catalogs.
- **Role & Contribution: Team Leader** — Organized feature assignments, established strict repository rules, and verified code health against Clean Architecture benchmarks. ●
- **Architecture & Patterns:** Clean Architecture layers, SOLID principles, OOP. ●
- **Technologies Used:** Flutter, Dart, Git Workflow Layouts.
- **Links:** [GitHub Organization \(Shoky-ORG\)](#)

Healthy Delivery App

- **Description:** Mobile delivery application designed to streamline order management and delivery operations, featuring real-time order tracking, delivery status updates, and intuitive user experiences.
- **Role & Contribution: Lead UI Developer** — Designed and implemented more than 15 responsive and pixel-perfect Flutter screens based on Figma designs while ensuring consistency across different device sizes.
- **Architecture & Patterns:** Implemented a scalable architecture using the Repository Pattern with clear separation between presentation, business logic, and data layers. ●
- **Technologies Used:** Flutter, Dart, REST APIs, JSON Serialization, State Management, Responsive UI Design.
- **Links:** [GitHub Repository](#)

Technical Projects (Part II)

Dokkana – E-Commerce Application

- **Description:** Comprehensive multi-vendor e-commerce platform incorporating real-time shopping cart validation and dynamic category rendering.
- **Role & Contribution: Team Leader** — Formulated data flow patterns, handled asynchronous local storage states, and guided engineers through structural code reviews. ●
- **Architecture & Patterns:** Clean Architecture, Domain-Driven Data Separation, Repository Pattern.
- **Technologies Used:** Flutter, Dart, Advanced State Workflows, Git, Peer Reviews. ●
- **Links:** [GitHub Repository](#)

PharoFit – Health & Fitness App

- **Description:** Interactive healthcare application providing customized fitness roadmaps, live streaming media resources, and healthcare data feeds.

- **Role & Contribution: Solo Developer** — Successfully implemented secure token-based user authentication, remote server API calling, and third-party media players. •

Architecture

& Patterns: MVVM structure, secure persistent authentication flow layers. • **Technologies**

Used: Flutter, Dart, REST APIs, Embedded YouTube API, Live Feed Integrations. • **Links:**

GitHub Repository

Quran Streaming & Radio App

- **Description:** Dedicated continuous background audio streaming application built to process online media broadcast links seamlessly across varying network speeds.
- **Role & Contribution: Solo Developer** — Overcame standard lifecycle limitations by building background audio handling pipelines using structured state wrappers.
- **Architecture & Patterns:** Complex service bindings, reactive event listeners. • **Technologies**
- Used:** Flutter, Dart, GetX, Cubit, Bloc State Engines, Asynchronous Playback Protocols. •
- Links:** GitHub Repository

Extracurricular Activities

Core Member & Team Leader – ICPC HTI Community **2023 – 2025**

- Directed internal mock competitions, curated regional programming problems, and managed operations for training workshops.

Competitor – Egyptian Collegiate Programming Contest (ECPC)

- Completed intensive technical assessments focused on runtime resource management, graph execution, and algorithmic complexity in C++.

Languages

- **Arabic:** Native Language Fluency
- **English:** Upper-Intermediate Proficiency (B2)
- **German:** Foundational Knowledge (A1)
